SCHOOLS OF DESIGN

21st Century Learning at Its Best...

The Metro Schools of Design encompass an exciting, new K-12 continuum that focuses on creativity, innovation, and design and capitalizes on artistic learning in a unique instructional setting called, project-based learning.

Project - Based Learning (PBL)

In PBL, students learn through the collaborative process of designing a solution and creating a product that answers the teacher's driving question and project requirements. These projects seek to incorporate the core state learning standards with a passionate pursuit of solving real community or global problems. This problem-solving approach to learning charges students to be actively engaged in the learning and skill building that is inherent in the creative process of designing a product or project. In turn, the PBL model provides students with the skills needed to be successful in the 21st century.

21st Century Skills

Metro is committed to helping students build a solid foundation of skills that will ensure their success in the 21st Century. Metro has identified five core 21st Century skills, called "Soft Skills," that are integrated across its K-12 continuum: creativity, critical thinking, communication, collaboration, and professional ethics. These skills ensure that students, in addition to learning the hard content of their courses, are also learning how to work effectively with their peers. Because of this, every Metro student, from kindergartener to high school senior, is evaluated on how effectively they incorporate and implement the soft skills into their project assignments.

Metro FAQ

- Who can apply for the Metro Schools?**
Any student who lives in the CCISD attendance zone or is the child of a district employee can apply.
- How are students selected for Metro?**
Students who submit an application to Metro are selected through an annual lottery.
